Announcements

- •Homework 2 due Tuesday at 11:59pm
- Project 1 due Thursday at 11:59pm

Extra debugging office hours in Soda 405: Tuesday 6-8, Wednesday 6-7, Thursday 5-7 Readers hold these office hours; they are the ones who give you composition scores! •Optional guerrilla section Monday 6pm-8pm, meeting outside of Soda 310

•Midterm 1 is next Monday 9/23 from 7pm to 9pm in various locations across campus -Closed book, paper-based exam.

- You may bring one hand-written page of notes that you created (front & back). You will have a study guide attached to your exam.
- Midterm information: <u>http://inst.eecs.berkeley.edu/~cs61a/fa13/exams/midterm1.html</u> Review session: Saturday 9/21 (details TBD)
- HKN Review session: Sunday 9/22 (details TBD)
- Review office hours on Monday 9/23 (details TBD)

Recursive Functions

Definition: A function is called *recursive* if the body of that function calls itself, either directly or indirectly.

 $\ensuremath{\mathbf{Implication:}}$ Executing the body of a recursive function may require applying that function again.

Digit Sums

2+0+1+3 = 6

Recursive Functions

"If a number a is divisible by 9, then sum_digits(a) is also divisible by 9. •Useful for typo detection!

·Credit cards actually use the Luhn algorithm, which we'll implement after digit_sum.

Sum Digits Without a While Statement

def split(n):

"""Split positive n into all but its last digit and its last digit.""" return n // 10, n % 10

def sum digits(n):

"""Return the sum of the digits of positive integer n."""

if n < 10

return n else:

all_but_last, last = split(n) return sum_digits(all_but_last) + last

Recursion in Environment Diagrams

Recursion in Environment Diagrams

	(Demo)
1 def fact(n):	(Demo)
→ 2 if n == 0: 3 return 1 4 else: → 5 return n * <u>fact</u> (n-1)	Global frame
6	fact
7 fact(3) • The same function fact is called multiple times.	n 3
Different frames keep track of the different arguments in each call.	<u>n</u> 2
•What n evaluates to depends upon which is the current environment.	fact
 Each call to fact solves a simpler problem than the last: smaller n. 	

Example: <u>http://goo.gl/XOP9ps</u>

Iteration vs Recursion Iteration is a special case of recursion $4!=4\cdot 3\cdot 2\cdot 1=24$ Using iterative control:

def fact_iter(n):
 total, k = 1, 1
 while k <= n:
 total, k = total*k, k+1
 return total</pre> def fact(n): $n! = \prod_{k=1}^{n} k$ Math: n, total, k, fact_iter n, fact

Example: <u>http://goo.gl/NgH3Lf</u>

The Recursive Leap of Faith

def fact(n): if n == 0: return 1 else: return n * fact(n-1)

Is fact implemented correctly?

- 1. Verify the base case.
- 2. Treat fact as a functional abstraction!
- Assume that fact(n-1) is correct.
- 4. Verify that fact(n) is correct, assuming that fact(n=1) correct.

Photo by Kevin Lee, Preikestolen, Norway

Names:

if fact(n):
 if n == 0:
 return 1
 else:
 return n * fact(n-1) $n! = \begin{cases} 1 & \text{if } n = 0 \\ n \cdot (n - 1)! & \text{otherwise} \end{cases}$

Using recursion:

Verifying Recursive Functions

The Luhn Algorithm

Used to verify credit card numbers

From Wikipedia: <u>http://en.wikipedia.org/wiki/Luhn_algorithm</u>

1. From the rightmost digit, which is the check digit, moving left, double the value of every second digit; if product of this doubling operation is greater than 9 (e.g., 7 * 2 = 14), then sum the digits of the products (e.g., 10: 1 + 0 = 1, 14: 1 + 4 = 5).

2. Take the sum of all the digits.

The Luhn sum of a valid credit card number is a multiple of 10.

(Demo)

(Demo)

Converting Recursion to Iteration

Can be tricky: Iteration is a special case of recursion.

Idea: Figure out what state must be maintained by the iterative function.

def sum_digits(n):
 """Return the sum of the digits of positive integer n."""
 if n < 10:
 return n
 else:
 all_but_last, last = split(n)
 return sum_digits(all_but_last) + last
 A partial sum
 What's left to sum
</pre>

Mutual Recursion

Recursion and Iteration

Converting Iteration to Recursion

More formulaic: Iteration is a special case of recursion. Idea: The state of an iteration can be passed as arguments.
