CS 164, Spring 2019   **CS 164: Team Assessment**   **P. N. Hilfinger**

Due: Friday, 10 May 2019, 2400

You'll find a template this for this assignment in the `shared` repository. Set up a personal repository (say `cs164-repo`) as described in the instructions, and then start your assignment with

```
$ cd cs164-repo
$ git fetch shared
$ git merge shared/assess
$ git push
```

Your local repository will now be on branch `master` and contain a directory named `assess` with a file in it. Please fill in the files `assess/proj1.txt`, `assess/proj2.txt`, and `assess/proj3.txt`. When you are done, submit them in the usual way by committing, tagging the commit as `assess-1`, `assess-2`, or some other numeric suffix, and then pushing tags.

For each of the files, identify the team members you worked with (that is, not including yourself), and their contributions to the project. You have 6 points for each project to split up among the team members to indicate their relative contributions to the team's solution.
