

CS-184: Computer Graphics

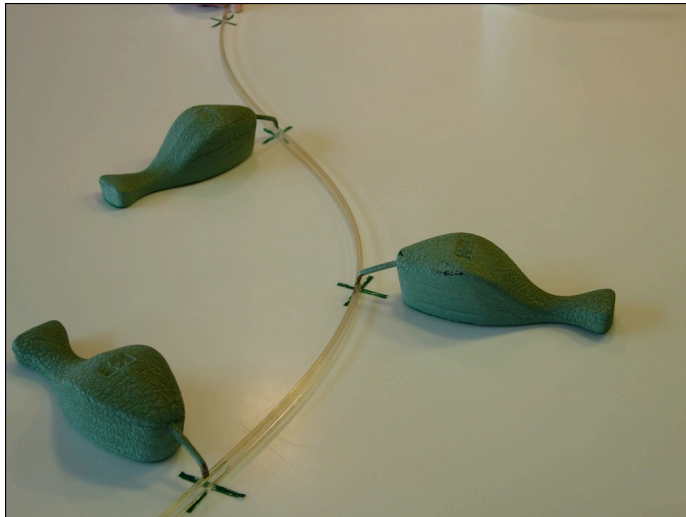

Lecture #15: Natural Splines, B-Splines, and NURBS

Prof. James O'Brien
University of California, Berkeley

V2006S-15-0.9

Natural Splines

- Draw a “smooth” line through several points

A real draftsman's
spline.

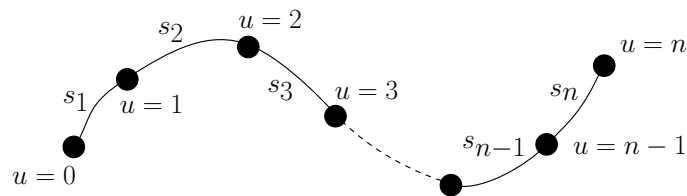

Image from Carl de Boor's
webpage.

Natural Cubic Splines

- Given $n + 1$ points
 - Generate a curve with n segments
 - Curves passes through points
 - Curve is C^2 continuous
- Use cubics because lower order is better...

3

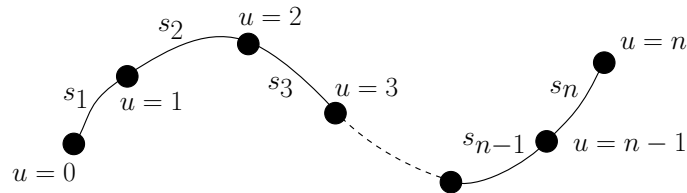

Natural Cubic Splines

$$\mathbf{x}(u) = \begin{cases} s_1(u) & \text{if } 0 \leq u < 1 \\ s_2(u-1) & \text{if } 1 \leq u < 2 \\ s_3(u-2) & \text{if } 2 \leq u < 3 \\ \vdots & \\ s_n(u-(n-1)) & \text{if } n-1 \leq u \leq n \end{cases}$$

4

Natural Cubic Splines

$$s_i(0) = p_{i-1} \quad i = 1 \dots n \quad \leftarrow n \text{ constraints}$$

$$s_i(1) = p_i \quad i = 1 \dots n \quad \leftarrow n \text{ constraints}$$

$$s'_i(1) = s'_{i+1}(0) \quad i = 1 \dots n-1 \quad \leftarrow n-1 \text{ constraints}$$

$$s''_i(1) = s''_{i+1}(0) \quad i = 1 \dots n-1 \quad \leftarrow n-1 \text{ constraints}$$

$$s''_1(0) = s''_n(1) = 0 \quad \leftarrow 2 \text{ constraints}$$

Total $4n$ constraints

5

Natural Cubic Splines

- Interpolate data points
- No convex hull property
- Non-local support
 - Consider matrix structure...
- C^2 using cubic polynomials

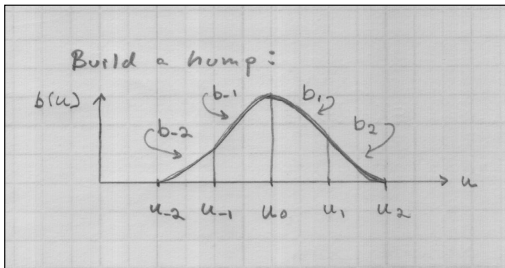

6

B-Splines

- Goal: C^2 cubic curves with local support
 - Give up interpolation
 - Get convex hull property
- Build basis by designing “hump” functions

7

B-Splines

$$b(u) = \begin{cases} b_{-2}(u) & \text{if } u_{-2} \leq u < u_{-1} \\ b_{-1}(u) & \text{if } u_{-1} \leq u < u_0 \\ b_{+1}(u) & \text{if } u_0 \leq u < u_{+1} \\ b_{+2}(u) & \text{if } u_{+1} \leq u \leq u_{+2} \end{cases}$$

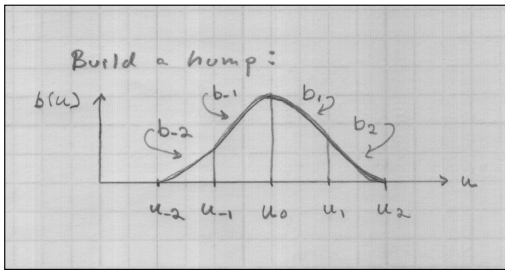

$$\begin{aligned} b''_{-2}(u_{-2}) = b'_{-2}(u_{-2}) = b_{-2}(u_{-2}) &= 0 \quad \leftarrow 3 \text{ constraints} \\ b''_{+2}(u_{+2}) = b'_{+2}(u_{+2}) = b_{+2}(u_{+2}) &= 0 \quad \leftarrow 3 \text{ constraints} \end{aligned}$$

$$\begin{aligned} b_{-2}(u_{-1}) &= b_{-1}(u_{-1}) \\ b_{-1}(u_0) &= b_{+1}(u_0) \\ b_{+1}(u_{+1}) &= b_{+2}(u_{+1}) \end{aligned} \quad \leftarrow \begin{cases} \text{Repeat for } b' \text{ and } b'' \\ 3 \times 3 = 9 \text{ constraints} \end{cases}$$

Total 15 constraints need one more

8

B-Splines

$$b(u) = \begin{cases} b_{-2}(u) & \text{if } u_{-2} \leq u < u_{-1} \\ b_{-1}(u) & \text{if } u_{-1} \leq u < u_0 \\ b_{+1}(u) & \text{if } u_0 \leq u < u_{+1} \\ b_{+2}(u) & \text{if } u_{+1} \leq u \leq u_{+2} \end{cases}$$

$$b''_{-2}(u_{-2}) = b'_{-2}(u_{-2}) = b_{-2}(u_{-2}) = 0 \quad \leftarrow 3 \text{ constraints}$$

$$b''_{+2}(u_{+2}) = b'_{+2}(u_{+2}) = b_{+2}(u_{+2}) = 0 \quad \leftarrow 3 \text{ constraints}$$

$$\begin{aligned} b_{-2}(u_{-1}) &= b_{-1}(u_{-1}) \\ b_{-1}(u_0) &= b_{+1}(u_0) \\ b_{+1}(u_{+1}) &= b_{+2}(u_{+1}) \end{aligned} \quad \leftarrow \begin{cases} \text{Repeat for } b' \text{ and } b'' \\ 3 \times 3 = 9 \text{ constraints} \end{cases}$$

$$b_{-2}(u_{-2}) + b_{-1}(u_{-1}) + b_{+1}(u_0) + b_{+2}(u_{+1}) = 1 \quad \leftarrow 1 \text{ constraint (convex hull)}$$

Total 16 constraints

9

B-Splines

- Build a curve w/ overlapping bumps
- Continuity
 - Inside bumps C^2
 - Bumps “fade out” with C^2 continuity
- Boundaries
 - Circular
 - Repeat end points
 - Extra end points

10

B-Splines

- Notation

- The basis functions are the $b_i(u)$
- “Hump” functions are the concatenated function
 - Sometimes the humps are called basis... can be confusing
- The u_i are the knot locations
- The weights on the hump/basis functions are control points

11

B-Splines

- Similar construction method can give higher continuity with higher degree polynomials
- Repeating knots drops continuity
 - Limit as knots approach each other
- Still cubics, so conversion to other cubic basis is just a matrix multiplication

12

B-Splines

- Geometric construction
 - Due to Cox and de Boor
 - My own notation, beware if you compare w/ text

- Let hump centered on u_i be $N_{i,4}(u)$

Cubic is order 4

$N_{i,k}(u)$ is order k hump, centered at u_i

Note: i is integer if k is even
 else $(i + 1/2)$ is integer

13

B-Splines

$$N_{i,1}(u) = \begin{cases} 1 & \text{if } u_{i-1/2} \leq u < u_{i+1/2} \\ 0 & \text{else} \end{cases}$$

$$N_{i+1/2,1}(u)$$

$$N_{i,k}(u) = \frac{(u - u_{i-k/2}) N_{i-k/2,k-1}(u)}{u_{i+k/2-1} - u_{i-k/2}} + \frac{(u_{i+k/2} - u) N_{i+1/2,k-1}(u)}{u_{i+k/2} - u_{i-k/2+1}}$$

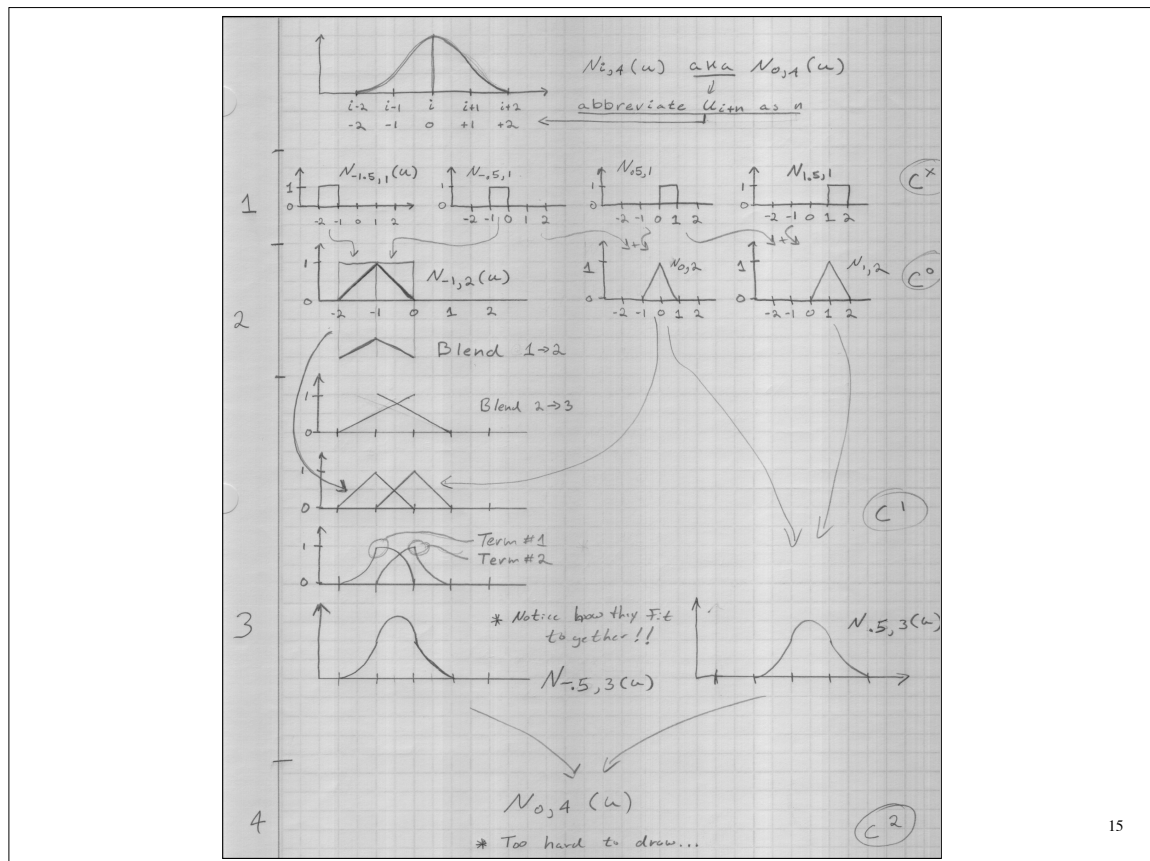

$k \geq 2$

"Term #1"

"Term #2"

Recursive defn.

14

15

NURBS

- **Nonuniform Rational B-Splines**
 - Basically B-Splines using homogeneous coordinates
 - Transform under perspective projection
 - A bit of extra control

16

NUBRS

$$\mathbf{p}_i = \begin{bmatrix} p_{ix} \\ p_{iy} \\ p_{iz} \\ p_{iw} \end{bmatrix} \quad \mathbf{x}(u) = \frac{\sum_i \begin{bmatrix} p_{ix} \\ p_{iy} \\ p_{iz} \end{bmatrix} N_i(u)}{\sum_i p_{iw} N_i(u)}$$

- Non-linear in the control points
- The p_{iw} are sometimes called “weights”
