## Lecture #40: Course Summary

- Autograder will start running this weekend.
- Please use git-bug for problems with submission, your code, the skeleton, or any of our software.
- Readers and lab assistants needed. Consider volunteering to be a reader or lab assistant for CS 10, self-paced courses, CS 61A, or CS 61B next semester.
- **Programming Contest:** Visit my web page for information about the annual programming contest, which we hold each fall. There are large collections of programming problems you can try your hand on.

## Course Topic Summary

- Programming language: Java
- Program Analysis
- Categories of data structure: Java library structure
- Sequences
- Trees
- Searching
- Sorting
- Pseudo-random numbers
- Graphs
- Pragmatic implementation topics

CS61B: Lecture #40 1 CS61B: Lecture #40 2 Last modified: Fri Dec 4 11:11:45 2015 Last modified: Fri Dec 4 11:11:45 2015 **Programming-Language Topics** Analysis • Object-based programming: organizing around data types • Asymptotic analysis • Object-oriented programming: •  $O(\cdot), o(\cdot), \Omega(\cdot), \Theta(\cdot)$  notations - Dynamic vs. static type • Worst case, average case. - Inheritance Amortized time - Idea of interface vs. implementation • Generic programming (the <···> stuff). • Memory model: containers, pointers, arrays • Numeric types • Java syntax and semantics Scope and extent • Standard idioms, patterns: - Objects used as functions (e.g., Comparator) - Partial implementations (e.g., AbstractList) - Iterators - Views (e.g., sublists) Last modified: Fri Dec 4 11:11:45 2015 CS61B: Lecture #40 3 CS61B: Lecture #40 4 Last modified: Fri Dec 4 11:11:45 2015

| Major Categories of Data Structure   | Sequences  |  |
|--|--|--|
| <ul> <li>Collection interface and its subtypes</li> <li>Map interface and its subtypes</li> <li>Generic skeleton implementations of collections, lists, maps (AbstractList, etc.)</li> <li>Complete concrete collection and map classes in Java library</li> </ul>   | <ul> <li>Linking:</li> <li>Single and double link manipulations</li> <li>Sentinels</li> <li>Linking vs. arrays</li> <li>Stacks, queues, deques</li> <li>Circular buffering</li> <li>Trade-offs: costs of basic operations</li> </ul>                                       |  |
|  | Trees  |  |
| Last modified: Fri Dec 4 11:11:45 2015 C561B: Lecture #40 5  | <ul> <li>Uses of trees: search, representing hierarchical structures</li> <li>Basic operations: insertion, deletion</li> <li>Tree traversals</li> <li>Representing trees</li> <li>Game trees</li> <li>Last modified: Fri Dec 4 11:11:45 2015</li> </ul>                    |  |
| Searching  | Sorting  |  |
| <ul> <li>Search trees, range searching</li> <li>Multidimensional searches: quad trees.</li> <li>Hashing</li> <li>Priority queues and heaps</li> <li>Balanced trees <ul> <li>Rebalancing by rotation (red-black trees)</li> <li>Balance by construction (B-trees)</li> <li>Probabilistic balance (skip lists)</li> <li>Tries</li> </ul> </li> <li>Search times, trade-offs</li> </ul> | <ul> <li>Uses of sorting</li> <li>Insertion sort</li> <li>Selection sorting</li> <li>Merge sort</li> <li>Heap sort</li> <li>Quicksort and selection</li> <li>Distribution sort</li> <li>Radix sort</li> <li>Complexity of various algorithms, when to use them?</li> </ul> |  |

| Random numbers  |                      | Graph structures  |      |
|---|----------------------|---|------|
| <ul> <li>Possible uses</li> <li>Idea of a pseudo-random sequence</li> <li>Linear congruential and additive generators</li> <li>Changing distributions: <ul> <li>Changing the range</li> <li>Non-uniform distributions</li> </ul> </li> <li>Shuffling, random selection</li> </ul> |                      | <ul> <li>Definition</li> <li>Uses: things represented by graphs</li> <li>Graph traversal: the generic traversal template</li> <li>Depth-first traversal, breadth-first traversal</li> <li>Topological sort</li> <li>Shortest paths</li> <li>Minimal spanning trees, union-find structures</li> <li>Memory management as a graph problem.</li> </ul> |      |
| Last modified: Fri Dec 4 11:11:45 2015  | CS61B: Lecture #40 9 | Last modified: Fri Dec 4 11:11:45 2015<br>CS61B: Lecture #4   | 0 10 |
|   |                      |   |      |
| <ul> <li>What debuggers can do</li> <li>How to use to pin down bugs</li> <li>Details of some debugger (Eclipse, gjdb, various Wiucts).</li> <li>Unit testing: what it means, how to use it.</li> <li>JUnit mechanics.</li> </ul>  | ndows/Sun prod-      | <ul> <li>What's it for?</li> <li>Basic concepts behind our particular system: <ul> <li>Working copy vs. repository copy</li> <li>Committing changes</li> <li>Updating and merging changes.</li> <li>Tagging</li> </ul> </li> </ul>  |      |

## A Case Study

- Presented Git version-control system as an example of a design using several ideas from this course.
- Graph (DAG) and tree structures represented with files as vertices and strings (file names), rather than machine addresses, as pointers.
- Use of hashing to create unique (or very, very likely to be unique) names: *probabilistic data structure*.
- Compression uses various kinds of map to facilitate conversion to and from compressed form, including arrays, tries, and hash tables

CS61B: Lecture #40 13

• Priority queue in Huffman coding.
