Announcements

- Lab sections on December 5, 6, and 7 will be organized as follows: Students will work on an exam-like set of exercises covering linked lists, stacks, queues, binary trees, binary search trees. Solutions will be thoroughly reviewed. 1 bonus point (out of 200) for completing the exercises.

- Please use git-bug for problems with submission, your code, the skeleton, or any of our software.

- **Tutors and lab assistants needed.** Consider volunteering to be a tutor or lab assistant for CS 10, self-paced courses, CS 61A, or CS 61B next semester.

- **Programming Contest:** Visit my web page for information about the annual programming contest, which we hold each fall. There are large collections of programming problems you can try your hand on.
Lecture #40: Course Summary

- Programming language: Java
- Program Analysis
- Categories of data structure: Java library structure
  - Sequences
  - Trees
  - Searching
  - Sorting
  - Pseudo-random numbers
- Graphs
- Pragmatic implementation topics
Programming-Language Topics

• Object-based programming: organizing around data types

• Object-oriented programming:
  - Dynamic vs. static type
  - Inheritance
  - Idea of interface vs. implementation

• Generic programming (the \(<\ldots>\) stuff).

• Memory model: containers, pointers, arrays

• Numeric types

• Java syntax and semantics

• Scope and extent

• Standard idioms, patterns:
  - Objects used as functions (e.g., Comparator)
  - Partial implementations (e.g., AbstractList)
  - Iterators
  - Views (e.g., sublists)
Analysis and Algorithmic Techniques

- Asymptotic analysis
- $O(\cdot), o(\cdot), \Omega(\cdot), \Theta(\cdot)$ notations
- Worst case, average case.
- Amortized time
- Memoization and dynamic programming.
Major Categories of Data Structure

- Collection interface and its subtypes
- Map interface and its subtypes
- Generic skeleton implementations of collections, lists, maps (AbstractList, etc.)
- Complete concrete collection and map classes in Java library
Sequences

- Linking:
  - Single and double link manipulations
  - Sentinels
- Linking vs. arrays
- Stacks, queues, deques
- Circular buffering
- Trade-offs: costs of basic operations

Trees

- Uses of trees: search, representing hierarchical structures
- Basic operations: insertion, deletion
- Tree traversals
- Representing trees
- Game trees
Searching

- Search trees, range searching
- Multidimensional searches: quad trees.
- Hashing
- Priority queues and heaps
- Balanced trees
  - Rebalancing by rotation (red-black trees)
  - Balance by construction (B-trees)
  - Probabilistic balance (skip lists)
  - Tries
- Search times, trade-offs
Sorting

- Uses of sorting
- Insertion sort
- Selection sorting
- Merge sort
- Heap sort
- Quicksort and selection
- Distribution sort
- Radix sort
- Complexity of various algorithms, when to use them?
Random numbers

- Possible uses
- Idea of a pseudo-random sequence
- Linear congruential and additive generators
- Changing distributions:
  - Changing the range
  - Non-uniform distributions
- Shuffling, random selection
Graph structures

• Definition
• Uses: things represented by graphs
• Graph traversal: the generic traversal template
• Depth-first traversal, breadth-first traversal
• Topological sort
• Shortest paths
• Minimal spanning trees, union-find structures
• Memory management as a graph problem.
Debugging

- What debuggers can do
- How to use to pin down bugs
- Details of some debugger (Eclipse, gjdb, various Windows/Sun products).
- Unit testing: what it means, how to use it.
- JUnit mechanics.
Version Control

• What’s it for?

• Basic concepts behind our particular system:
  - Working copy vs. repository copy
  - Committing changes
  - Updating and merging changes.
  - Tagging
A Case Study

- Presented Git version-control system as an example of a design using several ideas from this course.

- **Graph (DAG)** and **tree** structures represented with files as vertices and strings (file names), rather than machine addresses, as pointers.

- Use of hashing to create unique (or very, very likely to be unique) names: **probabilistic data structure**.

- Compression uses various kinds of **map** to facilitate conversion to and from compressed form, including **arrays**, **tries**, and **hash tables**.

- **Priority queue** in Huffman coding.
Assorted Side Trips

- Compression.
- Parallel processing.
- Storage management and garbage collection.
What’s After the Lower Division?

- **CS160**: User Interface Design (Hartmann)
- **CS161**: Computer Security (Popa)
- **CS162**: Operating Systems and System Programming (Joseph, Ragan-Kelley)
- **CS164**: Programming Languages and Compilers (Hilfinger)
- **CS170**: Efficient Algorithms and Intractable Problems (Chiesa, Vazirani)
- **CS174**: Combinatorics and Discrete Probability (Friedman)
- **CS184**: Graphics (Ng)
- **CS186**: Databases
- **CS188**: Artificial Intelligence (Dragan, Levine)
- **CS189**: Machine Learning
- **CS194**: Assorted Special Topics: Computational Design and Fabrication, Designing, Visualizing and Understanding Deep Neural Networks.
What's After the Lower Division? (II)

- **CS152: Computer Architecture (Asanovic)**

- Numerous graduate courses: including advanced versions of 152, 160, 161, 170, 184, 186, 189; plus Cryptography, VLSI design and many special topics.

- And, of course, EE courses!

- Various opportunities for participating in research and independent study (199)
What's After the Lower Division? (III)

• But EE and CS are just two of over 150 subjects!

• Internships offer more specific skills and exposure to real problems.

• Above all, I think that CS is a creative activity that (to the true artists) ought to fun!
