#### Lecture 22 – Representations of Combinatorial Logic Circuits

2010-03-12

#### **Eric Chang, TA**

Cal Alumni Wins 2009 Turing Award! Charles P. Thacker was named recipient of the 2009 Turing Award for inventing the first modern PC.

CS61C L22 Representations of Combinatorial Logic Circuits (1)

on each clock cycle the machine checks the inputs and moves to a new state and produces a new output...

CS61C L22 Representations of Combinatorial Logic Circuits (2)

# Hardware Implementation of FSM

... Therefore a register is needed to hold the a representation of which state the machine is in. Use a unique bit pattern for each state.

CS61C L22 Representations of Combinatorial Logic Circuits (3)

# Hardware for FSM: Combinational Logic

This lecture we will discuss the detailed implementation, but for now can look at its functional specification, truth table form.

### Truth table...

PS	Input	NS	Output
00	0	00	0
00	1	01	0
01	0	00	0
01	1	10	0
10	0	00	0
10	1	00	1

# **General Model for Synchronous Systems**

- Collection of CL blocks separated by registers.
- Registers may be back-to-back and CL blocks may be back-toback.
- Feedback is optional.
- Clock signal(s) connects only to clock input of registers.

### **Review**

- State elements are used to:
  - Build memories
  - Control the flow of information between other state elements and combinational logic
- D-flip-flops used to build registers
- Clocks tell us when D-flip-flops change
  - Setup and Hold times important
- We pipeline long-delay CL for faster clock
- Finite State Machines extremely useful
  - Represent states and transitions

# **Combinational Logic**

- FSMs had states and transitions
- How to we get from one state to the next?
- Answer: Combinational Logic

CS61C L22 Representations of Combinatorial Logic Circuits (7)

#### **Truth Tables**

a	b	c	d	у
0	0	0	0	F(0,0,0,0)
0	0	0	1	F(0,0,0,1)

## TT Example #1: 1 iff one (not both) a,b=1

#### **TT Example #2: 2-bit adder**

### **TT Example #3: 32-bit unsigned adder**

CS61C L22 Representations of Combinatorial Logic Circuits (11)

## **TT Example #4: 3-input majority circuit**

a	b	C	У
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	1
1	1	0	1
1	1	1	1

Logic Gates (1/2)

#### And vs. Or review – Dan's mnemonic

# **AND Gate**

#### Definition

A	B	C
0	0	0
0	1	0
1	0	0
1	1	1

CS61C L22 Representations of Combinatorial Logic Circuits (14)

Logic Gates (2/2)

CS61C L22 Representations of Combinatorial Logic Circuits (15)

# 2-input gates extend to n-inputs

- N-input XOR is the only one which isn't so obvious
- It's simple: XOR is a 1 iff the # of 1s at its input is odd ⇒

CS61C L22 Representations of Combinatorial Logic Circuits (16)

## Truth Table ⇒ Gates (e.g., FSM circ.)

PS	Input	NS	Output
00	0	00	0
00	1	01	0
01	0	00	0
01	1	10	0
10	0	00	0
10	1	00	1

#### or equivalently...

CS61C L22 Representations of Combinatorial Logic Circuits (18)

- Midterm has been graded and will be handed out in lecture Monday.
- Students that provide the best solution to each problem will be asked to demonstrate their solution in class on Monday.
- Next week's discussion TAs will answer more questions you have for the midterm

**Boolean Algebra** 

- George Boole, 19<sup>th</sup> Century mathematician
- Developed a mathematical system (algebra) involving logic
  - later known as "Boolean Algebra"

- Primitive functions: AND, OR and NOT
- The power of BA is there's a one-to-one correspondence between circuits made up of AND, OR and NOT gates and equations in BA

CS61C L22 Representations of Combinatorial Logic Circuits (20)

# **Boolean Algebra (e.g., for majority fun.)**

 $y = a \cdot b + a \cdot c + b \cdot c$ 

y = ab + ac + bc

# **Boolean Algebra (e.g., for FSM)**

PS	Input	NS	Output
00	0	00	0
00	1	01	0
01	0	00	0
01	1	10	0
10	0	00	0
10	1	00	1

#### or equivalently...

# $y = PS_1 \cdot PS_0 \cdot INPUT$

CS61C L22 Representations of Combinatorial Logic Circuits (22)

# **BA: Circuit & Algebraic Simplification**

original circuit

equation derived from original circuit

algebraic simplification

BA also great for circuit <u>verification</u> Circ X = Circ Y? use BA to prove!

simplified circuit

### Laws of Boolean Algebra

$x \cdot \overline{x} = 0$	$x + \overline{x} = 1$
$x \cdot 0 = 0$	x + 1 = 1
$x \cdot 1 = x$	x + 0 = x
$x \cdot x = x$	x + x = x
$x \cdot y = y \cdot x$	x + y = y + x
(xy)z = x(yz)	(x+y) + z = x + (y+z)
x(y+z) = xy + xz	x + yz = (x + y)(x + z)
xy + x = x	(x+y)x = x
$\overline{x}y + x = x + y$	$(\overline{x} + y)x = xy$
$\overline{x \cdot y} = \overline{x} + \overline{y}$	$\overline{x+y} = \overline{x} \cdot \overline{y}$

complementarity laws of 0's and 1's identities idempotent law commutativity associativity distribution uniting theorem uniting theorem v.2 DeMorgan's Law

## **Boolean Algebraic Simplification Example**

$$y = ab + a + c$$
  
=  $a(b+1) + c$  distribution, identity  
=  $a(1) + c$  law of 1's  
=  $a + c$  identity

# **Canonical forms (1/2)**

#### Sum-of-products (ORs of ANDs)

# **Canonical forms (2/2)**

$$y = \overline{a}\overline{b}\overline{c} + \overline{a}\overline{b}c + a\overline{b}\overline{c} + ab\overline{c}$$
  

$$= \overline{a}\overline{b}(\overline{c} + c) + a\overline{c}(\overline{b} + b) \quad distribution$$
  

$$= \overline{a}\overline{b}(1) + a\overline{c}(1) \quad complementarity$$
  

$$= \overline{a}\overline{b} + a\overline{c} \quad identity$$

CS61C L22 Representations of Combinatorial Logic Circuits (27)

- A.  $(a+b) \cdot (\overline{a}+b) = b$
- B. N-input gates can be thought of cascaded 2-input gates. I.e.,  $(a \Delta bc \Delta d \Delta e) = a \Delta (bc \Delta (d \Delta e))$ where  $\Delta$  is one of AND, OR, XOR, NAND
- C. You can use NOR(s) with clever wiring to simulate AND, OR, & NOT

ABC 1: FFF 2: FFT 3: FTF 4: FTT 5: TFF 6: TFT 7: TTF 8: TTT

```
C L22 Representations of Combinatorial Logic Circuits (28)
```

# **Peer Instruction Answer**

- A.  $(a+b)\cdot(a+b) = aa+ab+ba+bb = 0+b(a+a)+b = b+b = b TRUE$
- B. (next slide)
- C. You can use NOR(s) with clever wiring to simulate AND, OR, & NOT.
  - ° NOR(a,a)= $\overline{a+a} = \overline{aa} = \overline{a}$
- <sup>o</sup> Using this NOT, can we make a NOR an OR? An And?
- TRUE
- A.  $(a+b) \cdot (\overline{a}+b) = b$
- B. N-input gates can be thought of cascaded 2-input gates. I.e.,  $(a \Delta bc \Delta d \Delta e) = a \Delta (bc \Delta (d \Delta e))$ where  $\Delta$  is one of AND, OR, XOR, NAND
- C. You can use NOR(s) with clever wiring to simulate AND, OR, & NOT

## **Peer Instruction Answer (B)**

B. N-input gates can be thought of cascaded 2-input gates. I.e.,  $(a \Delta bc \Delta d \Delta e) = a \Delta (bc \Delta (d \Delta e))$ where  $\Delta$  is one of AND, OR, XOR, NAND...FALSE

"And In conclusion..."

- Pipeline big-delay CL for faster clock
- Finite State Machines extremely useful
  - You'll see them again in 150, 152 & 164
- Use this table and techniques we learned to transform from 1 to another
