BJT

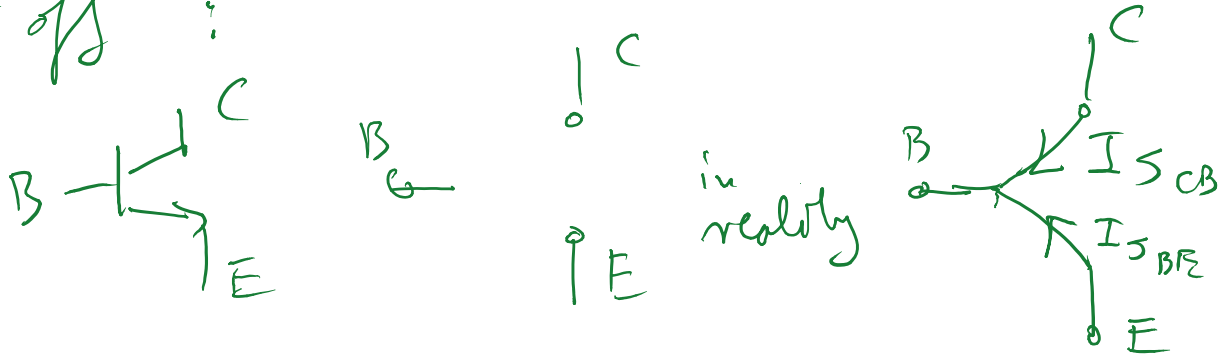

Regions of operation:

BE	BC	
R	R	Cutoff
F	R	Forward - Active
R	F	Reverse - Active
F	F	Saturation

Cut off :

Forward - Active Region

$$V_T = \frac{kT}{q}$$

Friday, January 24, 2014

- that did not recombine
- ① e^- injected from E to B^V : $I_{nB} = -A \cdot J_{nB}^{diff}$
 - ② h^+ injected from B to E: $I_{pE} = A \cdot J_{pE}^{diff}$
 - ③ recombination current in B: I_{rB}

$$I_C = I_{nB}$$

$$I_B = I_{rB} + I_{pE} \quad , \quad I_{pE} \gg I_{rB}$$

$$I_E = I_C + I_B$$

Collector current:

$$I_C = I_{nB} = -A \cdot J_{nB}^{diff} = -A q D_{nB} \cdot \frac{dn_{pB}(x)}{dx} =$$

diffusion coeff

$$= q A D_{nB} \frac{n_{pB}(0)}{W_B} = q A D_{nB} \frac{m^2}{N_{AB} \cdot W_B} \cdot e^{\frac{V_{BE}}{V_T}} \quad \text{slope in base}$$

$$I_C = I_{nB} = I_S \cdot e^{\frac{V_{BE}}{V_T}}$$

Friday, January 24, 2014

Base current: in base I_{B2}, I_{B1}

$$I_{pE} = A J_{pE}^{diff} = A q D_{pE} \cdot \frac{dp_{nE}(x)}{dx} = I_{pE}, I_{nB}$$

$$I_{pE} = A q D_{pE} \cdot \frac{p_{nE}(0)}{L_P} = \boxed{A q D_{pE} \frac{n_i^2}{N_{dE} \cdot L_P} \cdot e^{\frac{V_{BE}}{V_T}}}$$

$$I_{nB} = \frac{Q_e}{\tau_B} = \frac{1}{\tau_B} \cdot \left(\frac{1}{2} n_{pE}(0) \cdot w_B q A \right)$$

lifetime average # electrons

$$\overset{n_{pE}(0)}{\longleftrightarrow} \overset{0}{w_B} = \frac{1}{2} \frac{n_i^2 \cdot w_B}{N_{aB} \tau_B} \cdot q A e^{\frac{V_{BE}}{V_T}}$$

$$I_B = I_{pE} + I_{nB} = q A n_i^2 \left[\frac{D_{pE}}{N_{dE} \cdot L_P} + \frac{w_B}{2 N_{aB} \tau_B} \right] \cdot e^{\frac{V_{BE}}{V_T}}$$

Forward - current gain:

$$\beta_F = \frac{I_C}{I_B} = \frac{\frac{D_{nB}}{N_{aB} \cdot w_B}}{\frac{D_{pE}}{N_{dE} L_P} + \frac{w_B}{N_{aB} \cdot \tau_B}}$$

$$= \frac{D_{pE}}{D_{nB}} \cdot \frac{w_B}{L_P} \cdot \frac{N_{aB}}{N_{dE}} + \frac{w_B^2}{2 \tau_B \cdot D_{nB}}$$

$$\begin{matrix} N_{aB}, \\ N_{dE} \\ w_B \end{matrix}$$

To maximize β_F :

- $W_B \downarrow$
- $N_{aB} \ll N_{dE}$

NPN: $\beta_F \sim 50-500$
PNP: $\beta_F \sim 5-100$

Emitter current

$$I_E = I_B + I_C = I_C + \frac{I_C}{\beta_F} = \frac{I_C}{\alpha_F}$$

$$\alpha_F = \frac{\beta_F}{1 + \beta_F} \approx 0.99$$

F.A. Region model - Large signal

$$i_B = \frac{I_S}{\beta_F} e^{\frac{V_{BE}}{V_T}}$$
