

EE225B – Spring 2007

Computer Accounts

The EE225B class involves several programming assignments that may be completed using the EECS instructional computers. The information for acquiring access to these computers, as well as downloading software for use at home, can be found online at <http://www-inst.eecs.berkeley.edu/connecting.html>

In general, students enrolled through Tele-Bears should have no problems getting access, following these instructions.

UNIX accounts

- Used for email, home directories, computers in 199 Cory, and remote login
- Students can use their existing cory.eecs or Sun X-terminal accounts on the instructional systems
- Students who do not have UNIX accounts can request them on-line. Go to a UNIX computer in 199 Cory or ssh to 'cory.eecs.berkeley.edu' and login as 'newacct' (password: 'newacct'), then follow the on-line instructions. The account form is available in 253 Cory after 1pm the next day or 378 Cory afterward

Windows accounts

- Used for computers at labs in Cory Hall, 119 and 199 Cory is preferred. For all the available labs, see <http://inst.eecs.berkeley.edu/~inst/iesglabs.html>
- A Windows user account will be created for each student enrolled in the class, good for use during the semester only

Cardkey to access computer labs after hours

- Go to 253 Cory or 387 Soda to get a cardkey and to request access to Cory Hall and the labs

Software

- MATLAB is available on all UNIX and Windows computers in the labs
- Information on MATLAB and other software installed on these computers can be found at <http://inst.eecs.berkeley.edu/software.html>
