

# EE C128 / ME C134 – Feedback Control Systems

## Lecture – Chapter 7 – Steady-State Errors

Alexandre Bayen

Department of Electrical Engineering & Computer Science  
University of California Berkeley

September 23, 2013

### Chapter outline

- 7 Steady-State Errors
  - 7.1 Introduction
  - 7.2 Steady-state error for unity feedback systems
  - 7.3 Static error constants and system type
  - 7.4 Steady-state error specifications
  - 7.5 Steady-state error for disturbances
  - 7.6 Steady-state error for non-unity feedback systems
  - 7.7 Sensitivity
  - 7.8 Steady-state error for systems in state space

### Some definitions & test waveforms, [1, p. 340]

#### Steady-state error

- ▶ The difference between the input and the output for a prescribed test input as  $t \rightarrow \infty$ .

Waveform	Name	Physical interpretation	Time function	Laplace transform
	Step	Constant position	1	$\frac{1}{s}$
	Ramp	Constant velocity	$t$	$\frac{1}{s^2}$
	Parabola	Constant acceleration	$\frac{1}{2}t^2$	$\frac{1}{s^3}$

Table: Test waveforms for evaluating steady-state errors of position control systems

### Lecture abstract

#### Topics covered in this presentation

- ▶ Steady-state error sources
- ▶ Test waveform inputs for evaluation
- ▶ Sensitivity

- 7 Steady-State Errors
  - 7.1 Introduction
    - 7.2 Steady-state error for unity feedback systems
    - 7.3 Static error constants and system type
    - 7.4 Steady-state error specifications
    - 7.5 Steady-state error for disturbances
    - 7.6 Steady-state error for non-unity feedback systems
    - 7.7 Sensitivity
    - 7.8 Steady-state error for systems in state space

- 7 Steady-State Errors
  - 7.1 Introduction
  - 7.2 Steady-state error for unity feedback systems
  - 7.3 Static error constants and system type
  - 7.4 Steady-state error specifications
  - 7.5 Steady-state error for disturbances
  - 7.6 Steady-state error for non-unity feedback systems
  - 7.7 Sensitivity
  - 7.8 Steady-state error for systems in state space

Steady-state error in terms of CL TF,  $T(s)$ , [1, p. 344]

Error between the input,  $R(s)$ , and the output  $C(s)$

$$E(s) = R(s) - C(s)$$

$$C(s) = R(s)T(s)$$

$$E(s) = R(s)[1 - T(s)]$$

Applying the final value theorem

$$e(\infty) = \lim_{t \rightarrow \infty} e(t) = \lim_{s \rightarrow 0} sE(s)$$

$$e(\infty) = \lim_{s \rightarrow 0} sR(s)[1 - T(s)]$$

Steady-state error in terms of  $G(s)$ , [1, p. 345]

Error between the input,  $R(s)$ , and the output  $C(s)$

$$E(s) = R(s) - C(s)$$

$$C(s) = E(s)G(s)$$

$$E(s) = \frac{R(s)}{1 + G(s)}$$

Applying the final value theorem

$$e(\infty) = \lim_{s \rightarrow 0} \frac{sR(s)}{1 + G(s)}$$

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

## Static error constants, [1, p. 350]

For a step input,  $u(t)$

$$e_{step}(\infty) = \frac{1}{1 + \lim_{s \rightarrow 0} G(s)}$$

*Position constant*

$$K_p = \lim_{s \rightarrow 0} G(s)$$

For a ramp input,  $tu(t)$

$$e_{ramp}(\infty) = \frac{1}{\lim_{s \rightarrow 0} sG(s)}$$

*Velocity constant*

$$K_v = \lim_{s \rightarrow 0} sG(s)$$

For a parabolic input,  $\frac{1}{2}t^2u(t)$

$$e_{step}(\infty) = \frac{1}{\lim_{s \rightarrow 0} s^2G(s)}$$

*Acceleration constant*

$$K_a = \lim_{s \rightarrow 0} s^2G(s)$$

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

## Steady-state error for disturbances, [1, p. 356]

Output

$$C(s) = E(s)G_1(s)G_2(s) + D(s)G_2(s)$$

Error between the input,  $R(s)$ , and the output  $C(s)$ 

$$E(s) = R(s) - C(s)$$

After substitution

$$E(s) = \frac{1}{1 + G_1(s)G_2(s)}R(s) - \frac{G_2(s)}{1 + G_1(s)G_2(s)}D(s)$$

Figure: Feedback control system showing disturbance

## Steady-state error for disturbances, [1, p. 356]

Final value theorem

$$e(\infty) = \lim_{s \rightarrow 0} sE(s) = e_R(\infty) + e_D(\infty)$$

Steady-state error due to reference

$$e_R(\infty) = \lim_{s \rightarrow 0} \frac{s}{1 + G_1(s)G_2(s)}R(s)$$

Steady-state error due to disturbance

$$e_D(\infty) = - \lim_{s \rightarrow 0} \frac{sG_2(s)}{1 + G_1(s)G_2(s)}D(s)$$

Figure: Feedback control system showing disturbance

## Steady-state error due to step disturbance, [1, p. 356]

Steady-state error due to *step* disturbance

$$e_D(\infty) = \frac{1}{\lim_{s \rightarrow 0} \frac{1}{G_2(s)} + \lim_{s \rightarrow 0} G_1(s)}$$

Figure: System rearranged to show disturbance as input and error as output, with  $R(s) = 0$ 

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

## Sensitivity, [1, p. 362]

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

**Sensitivity:** The ratio of the fractional change in the function to the fractional change in the parameter as the fractional change of the parameter approaches zero

$$S_{F:P} = \frac{P}{F} \frac{\delta F}{\delta P}$$

## 7 Steady-State Errors

- 7.1 Introduction
- 7.2 Steady-state error for unity feedback systems
- 7.3 Static error constants and system type
- 7.4 Steady-state error specifications
- 7.5 Steady-state error for disturbances
- 7.6 Steady-state error for non-unity feedback systems
- 7.7 Sensitivity
- 7.8 Steady-state error for systems in state space

## Analysis via final value theorem, [1, p. 364]

CL system represented in SS

$$\begin{aligned}\dot{x} &= Ax + Bu \\ y &= Cx\end{aligned}$$

Error

$$E(s) = R(s) - Y(s)$$

Output

$$Y(s) = R(s)T(s)$$

Substitution

$$E(s) = R(s)[1 - C(sI - A)^{-1}B]$$

Final value theorem

$$\lim_{s \rightarrow 0} sE(s) = \lim_{s \rightarrow 0} sR(s)[1 - C(sI - A)^{-1}B]$$

## Analysis via step input substitution, [1, p. 366]

Steady-state unit step input

$$u = 1$$

Steady-state solution

$$x_{ss} = V$$

$$\dot{x}_{ss} = 0$$

CL system represented in SS

$$\dot{x} = Ax + Bu$$

$$y = Cx$$

Substitution

$$0 = AV + B$$

$$y_{ss} = CV$$

Solving

$$V = -A^{-1}B$$

Steady-state error

$$\begin{aligned}e(\infty) &= 1 - y_{ss} \\ &= 1 - CV \\ &= 1 + CA^{-1}B\end{aligned}$$

## Analysis via ramp input substitution, [1, p. 366]

Steady-state unit step input

$$u = t$$

Steady-state solution

$$x_{ss} = Vt + W$$

$$\dot{x}_{ss} = V$$

CL system represented in SS

$$\dot{x} = Ax + Bu$$

$$y = Cx$$

Substitution

$$V = A(Vt + W) + B$$

$$y_{ss} = C(Vt + W)$$

Solving

$$V = -A^{-1}B$$

$$W = A^{-1}V$$

Steady-state error

$$e(\infty) = \lim_{t \rightarrow \infty} t - y_{ss}$$
